DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Embodiment 1 in the reply filed on 7/11/2005 is acknowledged. Claims 5-19 have been cancelled. Claim 4 which does not read into embodiment 1 has been withdrawn and upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

 (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by anticipated by Merrill USPN 6,930,336.

The applied reference has a common assignee/inventor with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing

Application/Control Number: 10/796,763

Art Unit: 2826

under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Merrill discloses in fig. 7 A light-sensing pixel, having a p type doped region, in a CMOS image sensor, comprising: a first doped charge collecting region 46 buried within the p type doped region and configured to operate as a depleted potential well; a first n+ type doped plug 64 extending from near the surface of the image sensor to the first charge collecting region; a second doped charge collecting region 50 buried within the p type doped region, the second charge collecting region vertically separated from the first charge collecting region by the p type doped region and configured to operate as a depleted potential well; and a second n+ type doped plug 64 extending from near the surface of the image sensor to the second charge collecting region.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by admitted prior art (APA).

The APA discloses in fig. 1 A light-sensing pixel, having a p type doped region 102, in a CMOS image sensor, comprising: a first doped charge collecting region 103 buried within the p type doped region and configured to operate as a depleted potential well; a first n+ type doped plug 108 extending from near the surface of the image sensor to the first charge collecting region; a second doped charge collecting region 104 buried within the p type doped region, the second charge collecting region vertically separated from the first charge collecting region by the p type doped region and configured to operate as a depleted potential well; and a second

Application/Control Number: 10/796,763 Page 4

Art Unit: 2826

n+ type doped plug 107 extending from near the surface of the image sensor to the second charge collecting region.

Allowable Subject Matter

5. Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter:

The prior art fails to disclose first extension with n+ type doping coupled to and between a first charge collecting region and a first plug, and having a different doping concentration than the first charge collecting region; and a second extension with n+ type doping coupled to and between a second charge collecting region and a second plug and having a different doping concentration than the second charge collecting region.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to A. Sefer whose telephone number is (571) 272-1921.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on (571) 272-1915.
